NATURAL SCIENCES TRIPOS, PART IA, 2019 SUGGESTED READING LIST

We are often asked to make suggestions for preparatory reading and for introducing new subjects that you might be considering. There is no pre-requisite reading that needs to be done, but you may find the following books interesting and informative at a general level. Please note that the books present an initial view of the subject and may not include material covered by the undergraduate course.

* Indicates books in the lists that are the preferred one to read.
You are NOT expected to purchase any of the books on this suggested reading list.

<table>
<thead>
<tr>
<th>Biology of Cells</th>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lewis Wolpert</td>
<td>How we live and why we die: the secret lives of cells</td>
<td>Faber and Faber (paperback)</td>
</tr>
</tbody>
</table>

For those wishing to look at a suitable course textbook beforehand we suggest:

<table>
<thead>
<tr>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
</table>

Although A level Biology is not a requirement for the Biology of Cells Course, if you have done little or no biology before, you may find it helpful to begin with a less advanced textbook. We suggest: Alberts, B. et al (2009) Essential Cell Biology, 3rd Edition (Garland)

<table>
<thead>
<tr>
<th>Computer Science</th>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>A Kee Dewdney</td>
<td>The new Turing omnibus</td>
<td>Computer Sciences Press</td>
</tr>
<tr>
<td></td>
<td></td>
<td>1993 (reprinted 2003, Palgrave Macmillan)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Evolution and Behaviour</th>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
</table>

For those wishing to look at a suitable course textbook beforehand we suggest:

<table>
<thead>
<tr>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Chemistry</th>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>P.W Atkins</td>
<td>Molecules</td>
<td>Scientific American</td>
</tr>
<tr>
<td>J Keeler &amp; P Wothers</td>
<td>Why Chemical Reactions Happen</td>
<td>O.U.P.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Earth Sciences</th>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>*Nield, T</td>
<td>Supercontinent: Ten Billion Years in the Life of Our Planet</td>
<td>Granta 2007</td>
</tr>
<tr>
<td>Benton, M.J.</td>
<td>When Life Nearly Died</td>
<td>Thames and Hudson 2008</td>
</tr>
</tbody>
</table>
**Materials Science**

<table>
<thead>
<tr>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Material World</td>
<td>C.U.P.</td>
</tr>
<tr>
<td>New Science of Strong Materials</td>
<td>Penguin</td>
</tr>
</tbody>
</table>

**Physics**

We strongly recommend that students register (for free) and attempt problem-solving questions on Isaac Physics (isaacphysics.org). Specifically the level 1 to 6 questions in mathematics and physics.

https://isaacphysics.org/gameboards?filter=true

There are two books specifically recommended for the Part IA Physics course – these will be available in College libraries. Some lecturers will give references both to relevant sections of these books, and to worked examples in them, which help explain or expand on the material they present in their lectures. This is to encourage you to develop your skills in utilising the more extensive resource material provided in text-books to deepen your understanding of physics.

**Physiology of Organisms**

<table>
<thead>
<tr>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reaching for the sun</td>
<td>C.U.P (2nd edition)</td>
</tr>
<tr>
<td>Why Geese don’t get obese (and we do)</td>
<td>W H Freeman</td>
</tr>
</tbody>
</table>

**Mathematics**

<table>
<thead>
<tr>
<th>Title</th>
<th>Publisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>Foundations of Science Mathematics</td>
<td>O.U.P.</td>
</tr>
</tbody>
</table>

**Mathematical Biology**

We do not recommend any particular books, as there are none covering appropriate material at the correct level that would be suitable for self-study. However we do recommend some revision of the following topics from A Level Mathematics (or equivalent) as they will be used heavily in the first term: exponentials, logarithms, differentiation, integration and curve sketching. If you have studied any statistics at school it would also make sense to look over your notes for that, but if not, do not worry, all statistical material will be taught assuming no prior knowledge.
